STAGING

Test infrastructure

Product & Stakeholders

PRODUCTION

Deploy live

End Users

What does Production Environment mean?

Optimización de código en react con Code Splitting y Lazy Loading Images

(no es necesario con metaframeworks)

```
import React, { lazy, Suspense } from 'react';

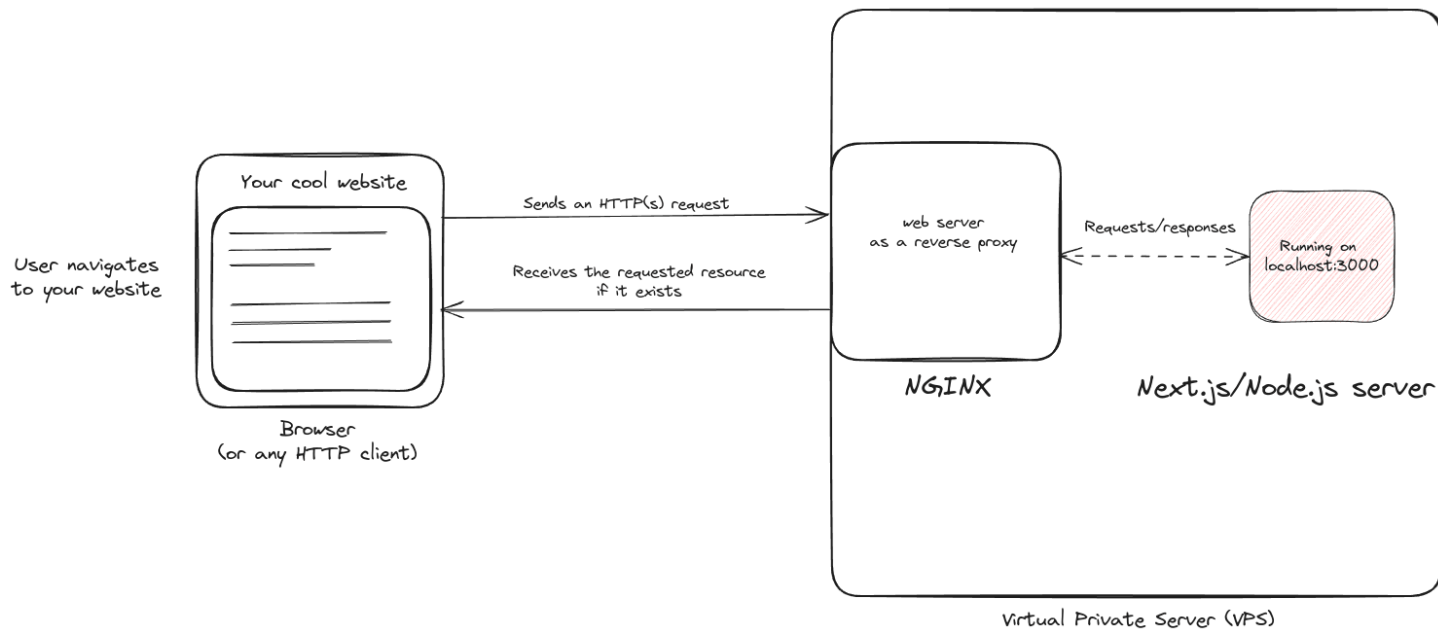

const LazyComponent = lazy(() => import('./LazyComponent'));

const App = () => {
  return (
    <div>
      <h1>My React App</h1>
      <Suspense fallback={<div>Loading ... </div>}>
        <LazyComponent />
        
      </Suspense>
    </div>
  );
};

export default App;
```

Code Splitting in React ...

A la aplicación se accede por un **proxy inverso**:

Using NGINX as a reverse proxy for the Next.js server

El proxy inverso sirve para:

- Cifrado de http → https
- Cache
- Balance de carga,
- Servir contenidos estáticos (imagenes, archivos, etc),
que no tienen porque pasar por la aplicación

Reasons to deploy Node.js with Nginx

Configuring NGINX

certbot

```
flavio — nodejs@nodejs-ubuntu-s-1vcpu-1gb-fra1-01: /var/www/html — ssh — j ~/.ssh/digitalocean — 84x11
nodejs@nodejs-ubuntu-s-1vcpu-1gb-fra1-01:/var/www/html$ pm2 list
```

id	name	mode	u	status	cpu	memory
0	hello	fork	0	online	0.6%	37.8mb

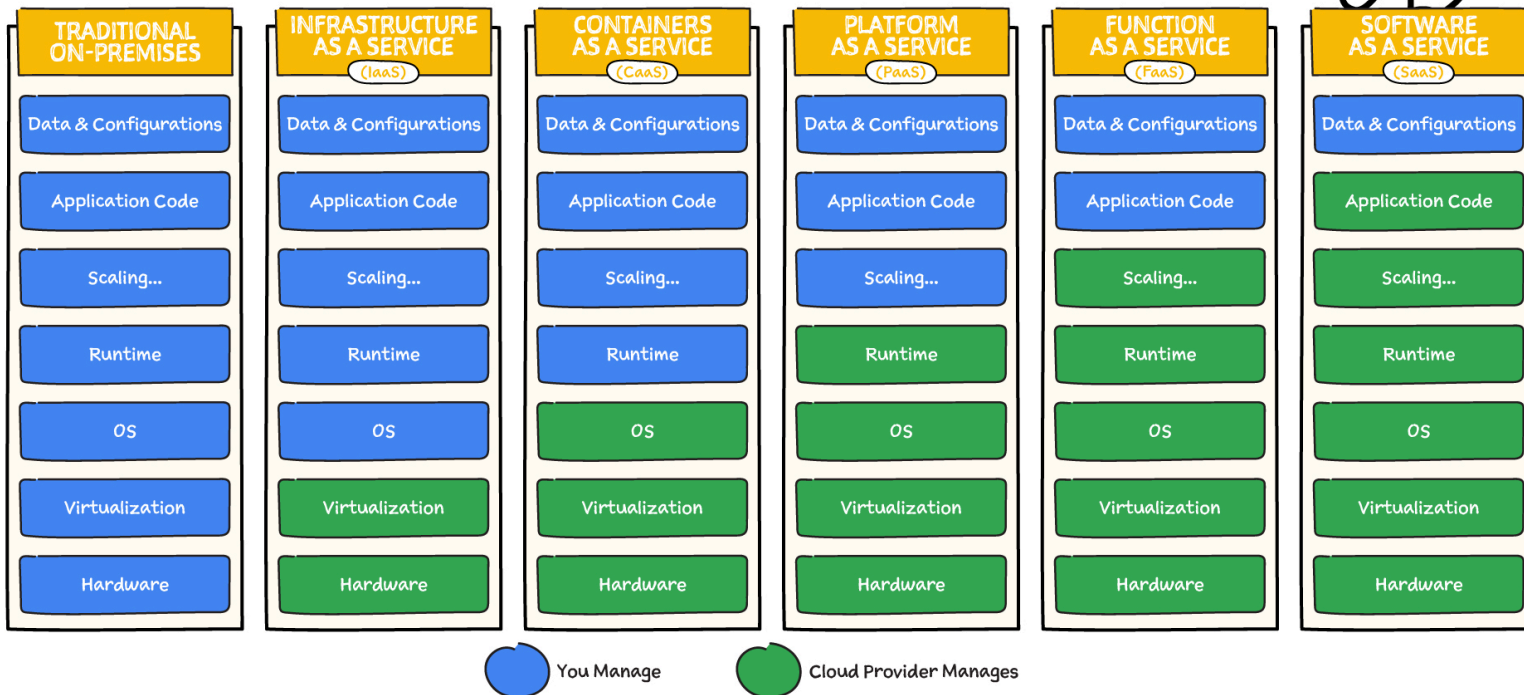

```
nodejs@nodejs-ubuntu-s-1vcpu-1gb-fra1-01:/var/www/html$
```

Se le puede añadir un gestor de procesos para node

o usar systemd para docker en Virtual Private Servers

Wait... what is Cloud again?

En la **nube**: PaaS, IaaS, SaaS, CaaS

Cloud

Amazon Web Services In Plain English

IAAS:

Deploy a Node.js App on a VPS (Minimal Setup)

Deploy-NodeJS-AWS-EC2

PAAS:

Compila una app de Node.js en App Engine

How to Deploy Your Node.js Backend Project to Vercel: A Step-by-Step Guide
